## SPECIALITY CHEMICALS FOR THE TEXTILE INDUSTRY

**DILUBE S.A.** is a company manufacturing lubricants and speciality chemicals, with more than 75 years experience in the manufacture and distribution of chemical products.

**DILUBE S.A.** is a pioneer company in the development of new products and speciality chemicals made to satisfy the needs of our customers.

The main aim of **DILUBE** is customer satisfaction, offering the personalised attention of our technicians.

**DILUBE** is currently one of the leading companies in the European market and, on an international level, is present in the markets of Europe, Africa, Central-America, South America and Asia.

**DILUBE's** activity is centred on the manufacture of both mineral and synthetic finishes as well as antistatic and cohesive additives and auxiliary products which are spread over several ranges that cover the different needs of the textile sector for the treatment of fibres and yarns.

Our products are used for optimising the different manufacturing processes of the textile industry, being applied in the different sectors from fibre producers, the whole range of spinning processes and also in the weaving process and garment making.

**DILUBE S.A.**, as a manufacturer of lubricants too, also has a large range of products for the lubrication of textile machinery.

### PRODUCT RANGE

#### PANTOCTAL RANGE

The **PANTOCTAL** range consists of synthetic lubricants that are highly antistatic and completely grease-free, with binding and moisturising properties. These products are used in the preparation of fibres as well as in the successive spinning processes.

#### SOLUBLE RANGE

The **SOLUBLE** range consists of mineral finishes made especially for wool and blends with wool, with excellent binding and lubricant powers. This range of products is used mainly in the conventional carding spinning process.

#### DILOL RANGE

The **DILOL** range consists of synthetic, antistatic, lubricant and wetting finishes for all types of fibres, both natural and synthetic. This range of products is apt for all spinning processes.

#### DILEROL-DILERTAK RANGE

The **DILEROL-DILERTAK** range consists of lubricant, binding and softening products, apt for use on both natural and synthetic fibres and used in the warping process.

#### SILTEX RANGE

The **SILTEX** range consists of low viscosity, chemically stable, lubricants used in the operations of bobbin winding, texturing and warping. This range of products prevents the formation of static charge, acting as a softener and a lubricant and lowering the coefficient of friction.

#### SILTEX MC RANGE

The **SILTEX MC** range consists of colourless lubricants with anti-corrosive and anti-wear characteristics. They are specially formulated for the lubrication of needles in circular knitting machines.
